ADDRESS RANGE SEARCHING

To search an address range go the Advanced Searching tab and select the Advanced Property Searching option - sample below:

From the Advanced Searching tab select the Advanced Property Searching option
Type in a sample search string like the one to the left and use asterisks (*) for your address range - the asterisk is used like a wild card substituting any number in the range - the pre/2 allows for street directionals like S. or South in case any are listed.

NOTE: leave off ave, st, street, blvd etc.

NOTE: be sure to tag the Current Records Only box to not retrieve past owners of the property.
All of the addresses in that range will be displayed in the results list which can be downloaded to Excel from the print options in the upper right hand corner of the page.
